A stylized graphic of an olive branch with several large, dark green leaves and a few small olives, set against a light green background. The branch enters from the left and extends towards the center of the page.

Plasdene Glass-Pak is proud to introduce a unique 31.5mm Plastic Olive Oil Closure with tamper evident band to detect counterfeiting. Capable of a steady and even pour, the new closure is set apart from other oil caps with its elegant profile, tamper evidence and ease of use.

The 31.5mm HDPE plastic Olio-Pour™ closure achieves a perfect pour cut off; the well of the pourer ensuring any spill will flow back into the bottle. The longer smooth skirt provides a more stylish profile of bottle and cap, and creates the opportunity to print on both the top of the cap and the skirting around the cap and individual embossing on the skirt.

Made of durable HDPE plastic material, the closure has an even and positive engagement of the tamper evident thread on to the bottle, and can be applied either using semi automatic or fully automatic capping machines, or hand applied with a firm twist, making it ideal for niche volume hand application with or without the aid of our hand applicator chuck.

The steadily growing Australian olive market has been asking for some time for a user friendly oil closure that incorporates both a built in pourer and tamper evident feature. Olio Pour™ addresses these requirements and eliminates the need for expensive roll on mechanical capping equipment or the sometimes unreliable hand crimpers, required for the imported metal closures.

This HDPE closure is exclusively available in colours of black and gold with a matt finish from the seven Plasdene Glass-Pak Distribution Centres in all major Australian cities as well as Newcastle, NSW. Custom requirements including different tints and embossing may also be developed.

Plasdene Glass-Pak now complements the cap with the launch of a hand 'applicator' to aid manual application.

Tips for applying the Olio Pour™ by Hand

Pre-place the cap vertically on the neck of the bottle. With an even downward pressure, either screw the cap down, or ideally, whilst holding the cap steady and applying the pressure to Plasdene Glass-Pak's Olio-Pour™ hand applicator, rotate the bottle so as it screws into the cap.

Plasdene Glass-Pak recommends the closure to be applied slowly and evenly, rather than quickly applying application torque.

Problems with application may arise if the caps are not evenly placed vertically on the neck of the bottle. We also recommend applying closures in a warm room environment, as frosty conditions can sometimes make the closures brittle.

For more information or to purchase your own hand applicator please contact your local Plasdene Glass-Pak distribution centre.
